

SUNY Broome
Global Service Learning in Haiti
BIO 104/HST 104:
Health for Haiti Winter 2020

Winter 2020

January 2 - January 11, 2020

The major focus of this global service learning course is to organize student, faculty and community efforts to provide practical assistance to the people of Haiti.

The island nation of Haiti is located in the Caribbean. Many people living in Haiti lack adequate access to food, clean water, clothing, shelter, healthcare, education and sanitation. Health for Haiti students will strive to meet some of these needs by partnering with local volunteers to provide clean water, solar power, education and computer literacy, agricultural support and access to food, microeconomic initiatives, simple medical and dental services, and hygienic toilets.

Since Health for Haiti began in 2014, we have installed a water filtration system that is providing thousands of gallons of clean water to hundreds of local families each day, installed solar panels, built classrooms, distributed food to hundreds of families, started community gardens that are providing food for school lunches, provided education programs to hundreds of children, created multiple computer labs for children and adults, created a sewing school, and served hundreds of patients at free medical and dental clinics.

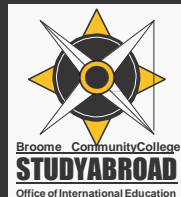

Eligibility Requirement

Students should demonstrate a desire to participate in global service learning in Haiti.

Course Description BIO 104/HST 104

Students will explore the dynamics between poverty, education and healthcare, address the most pressing needs of Haitian people, and learn historical, cultural, economic, social and political aspects of Haiti. Students will engage in service projects at orphanages, hospitals, health clinics, and community centers in urban and rural areas of Haiti. Students will participate in holistic and sustainable community development.

Service projects are based on the pre-existing skills of students and community needs as identified by our partners in Haiti. The course will foster fellowship and cultural humility, provide humanitarian assistance, and prepare students to participate in a dynamic, global world. Health for Haiti welcomes students from all disciplines and backgrounds.

Credits: 4 Credits: 1 Class Hour, 6 Laboratory Hours

Learning Outcomes:

1. Demonstrate critical reflection about how own attitudes and beliefs are different from those of other cultures and communities.
